

Amber M. Jackson

Data Governance Specialist | Enterprise Policies, Stewardship, MDM & Data Quality Controls

Enterprise Data Governance | Master Data Management & Stewardship | Data Quality & Audit-Ready Controls | Power BI, SQL, Python | SAP S/4HANA

Chicago, IL | amber.jackson94hks@gmail.com | (773) 701-3704 | LinkedIn: amber-jackson-26771545

PROFESSIONAL SUMMARY

Enterprise data-governance practitioner with 10 years of experience in regulated manufacturing - currently leading a seven-person data delivery model while owning the master-data governance framework, stewardship model, data-quality controls, and executive-facing Power BI analytics for a global manufacturer. Builds governance that works in practice: decision rights and data ownership, policies and procedures people actually follow, four-eye verification, exception handling, access controls, and audit-ready traceability. Supports a global SAP S/4HANA transformation as site representative. MBA; U.S. citizen (ITAR-eligible).

CORE COMPETENCIES

Enterprise Data Governance: End-to-end governance operating model - data ownership, stewardship roles, decision rights, policies and procedures, approvals, exception handling, escalation paths, access controls, and audit-ready documentation across 40,000+ assets and 11,000+ maintenance plans.

Master Data & Reference Data Management: SAP PM/MM/MDG-adjacent master-data lifecycle ownership - creation, enrichment, controlled change via LSMW/BDC (about 50,000 governed batch updates), validation, dry runs, and traceable documentation.

Data Quality & Controls: ALCOA+/GDP-based four-eye verification across 1,000+ data-intake forms, validation logic at the point of entry, exception-driven remediation with root-cause prevention, and data-accuracy initiatives with measurable outcomes (2,167 BOM audit, August 22, 2026 snapshot).

Audit, Risk & Compliance Support: Regulated (GMP) environment experience - audit-ready traceability across 400,000+ audit-matrix documents (May 2026 snapshot), standardized KPI definitions with governed business rules, and controlled-change evidence for internal and external review.

Training, Adoption & Stewardship Enablement: 30+ topic training library, competency-based access governance with Data Integrity and SAP Security partners, and coaching that cut user-reported support demand about 35%.

PROFESSIONAL EXPERIENCE

Head of Data & Support | Manager, SAP Plant Maintenance / Data Integrity *Bradley / Kankakee, IL | Feb 2024 - Present*
CSL Behring

- Lead a seven-person enterprise data delivery model comprising five Master Data Custodians and two cross-functional support resources, governing SAP master-data work through role ownership, competency standards, intake controls, approvals, four-eye verification, escalation paths, and controlled execution.
- Own lifecycle governance across 40,000+ assets and 11,000+ maintenance plans plus functional locations, maintenance items, task lists, BOMs, object lists, and related master data across Manufacturing, Engineering, Reliability, Quality, IT, Business Intelligence, and Data Science.
- Designed and continuously improve the end-to-end data-governance operating model, defining decision rights, data ownership, approvals, exception handling, documentation, verification logic, access controls, training requirements, handoffs, and escalation so complex master-data changes are governed as an integrated service.
- Established and proceduralized ALCOA+/GDP-based four-eye verification across 1,000+ data-intake forms, converting recurring discrepancies into targeted feedback, qualification standards, stronger controls, and clearer accountability.
- Own competency-based SAP Data Custodian access governance, coordinating business owners, Data Integrity, SAP Security, and SailPoint approvals so privileged master-data roles are granted to trained personnel and remain aligned with controlled-change expectations.
- Established standardized KPI definitions, calculations, and business rules with audit-ready traceability across 400,000+ audit-matrix documents (May 2026 snapshot) - a governed business glossary in practice so every consumer reconciles to the same numbers.
- Led a structured data-accuracy initiative covering 2,167 equipment-to-functional-location BOMs (August 22, 2026 snapshot) with functional-location hierarchy remediation spanning 1,567 Level 2 and 910 Level 3 records - measurable quality outcomes with root-cause prevention.
- Architected high-volume SAP migration and controlled mass-change capability across PM, MM, and MDG using LSMW, BDC batch input, entity mapping, validation logic, dry runs, and traceable documentation - about 50,000 controlled batch updates supporting Spare Parts Optimization and more than 100,000 material-master updates via LSMW.
- Built and continuously expand an executive-facing Power BI operational-intelligence model integrating 2.4M+ SAP change-document records (May 2026 snapshot) with ServiceNow demand data - engineered relationships, object categorization, and KPIs that convert technical system values into decision-ready business views.
- Implemented and matured the site SAP master-data ServiceNow intake and reporting model (3,120 routed tickets by mid-August 2026), independently learning ServiceNow table structures to build interactive dashboards and cascading filters for ownership, aging, prioritization, rework, throughput, backlog, and turnaround.
- Represent Kankakee in global SAP S/4HANA CMMS standardization and support SAP RISE/S/4HANA releases through blueprinting, UAT, hypercare, defect/deviation review, data validation, and release readiness across local and global teams.
- Drive team capability and knowledge continuity through coaching and cross-training on SAP scenarios, data migration, dashboard maintenance, data-integrity expectations, automation, responsible AI use, and escalation practices.

Maintenance Planner / Scheduler

Bradley, IL | Jul 2022 - Feb 2024

CSL Behring

- Hired to pilot and establish the Maintenance Planner / Scheduler function in a regulated pharmaceutical manufacturing environment, translating cross-functional constraints into executable priorities and repeatable, documented processes.

- Built automated Excel/VBA scheduling and forecasting tools, detailed Gantt views, KPI reporting, and Power BI/Tableau/Qlik Sense dashboards connecting SAP and operational data to maintenance, metrology, production, and schedule-performance decisions.
- Partnered with internal teams and external consultants on operational improvement work that contributed to a 50% increase in pharmaceutical production volume and a 67% reduction in cycle time.

Global Production Planner II, Prototype Production

La Vergne, TN | Sep 2020 - Jul 2022

Sumitomo Electric Wiring Systems, Inc.

- Owned recurring planning across prototype design changes, supplier readiness, purchase orders, production constraints, international shipments, and implementation timing for a global automotive manufacturing network.
- Drove adoption of a centralized Production Control master list that replaced redundant departmental trackers and improved shared visibility across Engineering, Delivery, Production Control, Manufacturing, suppliers, logistics partners, and overseas plants - an early master-data governance win built on standards, single source, and cross-department buy-in.
- Led recurring cross-functional planning and negotiated implementation timing in English and Japanese, connecting engineering-release decisions to supplier readiness, production execution, logistics, and customer commitments.

Global Production Planner I, Mass Production

La Vergne, TN | Sep 2019 - Sep 2020

Sumitomo Electric Wiring Systems, Inc.

- Converted weekly customer forecasts and inventory data into production plans and purchase orders while monitoring shortages, active orders, expedite liability, obsolescence risk, in-transit inventory, and continuity of supply.
- Coordinated suppliers, plants, freight forwarders, warehouses, and logistics teams during urgent situations to protect customer delivery and production continuity.

SELECTED GOVERNANCE IMPACT

- **Governance as Execution:** built role ownership, approvals, four-eye verification, access controls, exception handling, escalation, qualification standards, and measurable service KPIs directly into daily master-data workflows rather than policy documents.
- **Audit-Ready by Default:** standardized KPI definitions and business rules with traceable documentation across 400,000+ documents, plus controlled-change evidence for every mass update - dry runs, validation logic, and review trails.
- **Data Quality with Measurable Outcomes:** a 2,167-BOM data-accuracy initiative with hierarchy remediation across 1,567 Level 2 and 910 Level 3 records, and a 25,197-work-order review that identified 97 execution exceptions and translated findings into targeted corrective action.
- **Stewardship Enablement:** redesigned the Data Custodian Team around value-stream ownership, built a 30+ topic training library, and coordinated competency-based access governance with Data Integrity and SAP Security partners; user-reported support demand declined about 35%.
- **Automation Under Control:** Python/NLP workflows that reduced a 500+ hour manual review to under one hour, and parsers that mapped about 80,000 operations in under 10 minutes - all with documented, repeatable logic.

ADDITIONAL EXPERIENCE

Assistant Language Teacher, JET Program

Nara, Japan | Jul 2016 - Jul 2019 - Taught and coached Japanese high-school students through lesson design, presentations, and cross-cultural communication; developed facilitation and training skills later applied to global business and technical environments.

Japanese Chatbot Trainer, Remotasks

Remote | Jun 2023 - May 2024 - Evaluated and refined Japanese-language AI chatbot behavior through annotation, language-quality review, and instruction alignment.

Japanese Translator, LuTX

Remote | Apr 2023 - Oct 2023 - Translated and localized Japanese digital entertainment content into English with attention to tone, cultural nuance, and U.S. audience accessibility.

Intern, HASEGAWA KOGYO Co., Ltd.

Osaka, Japan | Jul 2018 - Short-term internship strengthening professional Japanese-language and cross-cultural business communication skills.

EDUCATION & SKILLS

Master of Business Administration

Middle Tennessee State University | GPA 3.67

Bachelor of Arts

International Economics & Cultural Affairs / East Asian Studies | Valparaiso University

Credentials: Google Data Analytics, Harvard Data Science (R), Python/R/SQL Essentials, Tableau, Advanced Excel, Seeq Bootcamp, Management Essentials, Global C@talyt (1 of 200 enterprise-wide)

Analytics Platforms: Power BI (DAX, Power Query), SQL, Python (pandas, NLP), R, Tableau, Qlik Sense, ServiceNow, advanced Excel/VBA, Smartsheet, Power Automate

Enterprise Systems: SAP S/4HANA PM/MM/MDG, LSMW, BDC, SQVI, SE16N, SAP RISE, WorkManager, SailPoint (access-governance coordination)

Languages: Japanese (JLPT N2), Korean (TOPIK I Level 2), Mandarin Chinese (conversational), French (beginner)
